

It is time for an Upgrade

We switch to 4G

Localizing

With a stable signal you can easily locate your objects,...

Securing

arm or disarm your security systems or send other commands,...

Alarming

send an emergency call in danger situations and alert the security center.

More security with a reliable network

The Corona crisis showed us even more: A reliable and stable network is essential for cargo and person security, for security is based on communication. No matter whether telematics systems or a single emergency call, both demand a reliable signal.

Network congestions lead to connection problems and slow data transfers. And it's especially older network providers (e.g. 2G / GPRS) who have their limitations when at the same time coping with the uptick in demand.

We figure it's high time for a 4G product upgrade.

EXTENDED NETWORK

The 4G/LTE network is highly developed and being continually upgraded.

LESS BURDENED

Because independent of the privat internet (M2M-IoT M1/NB Netz)

LOW LATENCY

Much shorter latencies for data transfers thanks to a strong signal.

THE NEW SATMOS GENERATION

The new generation of the SatMOS® localization and security modules is 4G (M2M-IoT M1 and NB) capable, and will replace previous SatMOS® generations. You can simply install the new module in your existing security device without any effort - just plug'n'secure. A quick and easy security upgrade for your truck, trailer or light craft vehicle. No reconstructions needed.

PERSON SECURITY USING 4G

Person security is a matter of honor - if not a human right. We have been supporting companies and associations with our product solutions for personal safety for over a decade. Whether lone worker or a disabled or needy person, our SOS button will give them the opportunity to make themselves noticed and call for help in the case of an emergency. Now also using 4G!

KEEP AN EYE ON EVERYTHING - OUR SOFTWARE SOLUTIONS

A strong signal is great, but you have to be able to receive the sent message, read it, and react. Experience a high level of security and stability with our compatible and flexible software solutions, designed to enhance transport security, and the associated transportation of valuable goods.

Using the web portal SatWEB.online you can control and monitor your entire fleet. A variety of background services will, at the same time, automatically perform crucial security-related tasks without you having to worry about it.

With our partner Melton Technologies we offer you a software suite designed, not only, to secure and track your fleet, but also to plan and manage tours and costs conveniently and clearly. Using the HorizonGO app driver and transport company can stay in touch at any time.
