

SatMOS®-17tractor

The entry into the safety-optimized object location

You would like to protect the driver with an alarm button and monitor the loading space of your van?

You want to locate your car, truck or tractor, or know when they are set in motion?

Then the SatMOS®.tractor could be interesting for you.

Due to its small design and easy handling, there are numerous areas of use in which the SatMOS®.tractor can help you. It was conceived as an entry into the security and tracking of vehicles of any kind. Together with the typical SatMARS security standards, the system meets the requirements of a reliable and universally usable tracking unit with anti-theft protection for your objects.

The waterproof housing allows a quick and easy installation from the outside, this results in a variety of uses and locations up to the hidden installation eg. under the vehicle.

Applications

- Anti-theft and tracking of tractors, trailers, rentals, taxis etc.
- Stationary monitoring, for example at the dealer

The strengths at a glance

- Expandable to an electronic logbook
- Expandable to an upscale security system with SatSENS family products
- The compact size offers maximum flexibility when mounting in the vehicle
- Integrated battery enables location without a vehicle battery
