

SatSENS.smoke

Photoelectronic smoke detector with alarm contact

"Smoke detectors save lives!", this is true not only for use in private households and offices, but also in mobile vehicles such as mobile homes or trucks.

Because a fire or other dangerous smoke can happen anytime and anywhere, it is good to have a detector. The smoke detector not only reports the alarm visually and acoustically, but also has a digital output to inform a telematics unit about the situation and remotely request help.

Due to the battery-powered mode, an installation in trailers, semi-trailers and swap bodies is also possible and can be realized quickly and protects your transport goods against damage and theft.

Strengths at a glance

- Photoelectronic smoke detector for battery operation with integrated output
- Safety through automatic self-test with indication of a malfunction
- Additional safety through real electronic smoke chamber test at the push of a button
- Connectable to devices of the SatMOS® family and third-party providers

Technical Data

- Battery operation: 9V lithium block battery (included).
- Battery life: approx. 6 years
- Mounting type: ceiling mount
- Dimensions: Height 48mm, diameter 106mm
- Tested according to: EN 14604:2005 + AC:2008
- Signal volume: approx. 85dB / 3m
- Smoke chamber test: at the push of a button
- Self test: automatically approx. every 45sec with indication of a malfunction
- Interface: switching output with integrated relay driver in case of alarm
