

SatMOS®.tractor

-  | 50 g
-  | 74 mm x 49 mm x 20 mm
-  | In operation: -30°C to +75°C
-  | Power supply: 12 / 24 VDC

Features

- Compact size and robust housing
- Can be extended to an electronic logbook
- Can be expanded via the SatSENS family to create a sophisticated security system

Would you like to protect the driver with an alarm button and monitor the load compartment of your van, or locate your car, van or tractor unit to know when it is set in motion? Then the SatMOS®.tractor is the ideal solution for you.

Thanks to its small design and easy handling, the SatMOS®.tractor can be used in a wide range of applications. It was designed as an entry-level solution for securing and tracking vehicles of all kinds. Together with the security standards and expandability typical of SatMARS, the system meets the requirements of a complete security system. It can be connected to the SatSENS.burglar, the SatSENS.door or the SatSENS.alert. Thanks to the variability of the system, it can be installed quickly and concealed in the vehicle.

Advantages

- The compact size offers maximum flexibility for installation in the vehicle
- Integrated battery that also enables localization without a vehicle battery
